

PIZZA SALES ANALYSIS

Data Analysis using Power BI

Presented by: Srilatha

INTRODUCTION

- “Pizza sales data is analysed using Power BI.”
- “The main purpose is to understand order patterns.”
- “Delivery performance is also analysed.”
- “Interactive visuals are used for better understanding”

OBJECTIVES

- Analysed total pizza orders.
- Compare different pizza types.
- Analysed delivery efficiency.
- Analyze pizza sizes
- Understand delivery duration.
- Identify useful business insights

DATASET

- Delay(min)
- Delivery Duration
- Order ID
- Order Month
- Order Hour
- Order time
- Pizza Size
- Pizza Completion
- Payment Method
- Payment Category
- Location
- Restaurant Average
- Delivery Time
- Distance(km)
- Is Delayed
- Is Peak Hour
- Is Weekend
- Pizza Type

DATA PREPARATION

- Imported the dataset into Power BI.
- Checked the data fields.
- Selected required columns.
- Applied suitable aggregations.
- Created measures for analysis.

KPI CARDS

- **Total Orders -** Total number of pizza orders.
- **Average Delivery Duration –** Average time taken for delivery.
- **Average Delivery Efficiency –** Average delivery efficiency

VISUALIZATION

- Orders by Pizza Type
- Average Delivery Duration by Pizza Size
- Delivery Efficiency by Pizza Size
- Pizza Type analysis

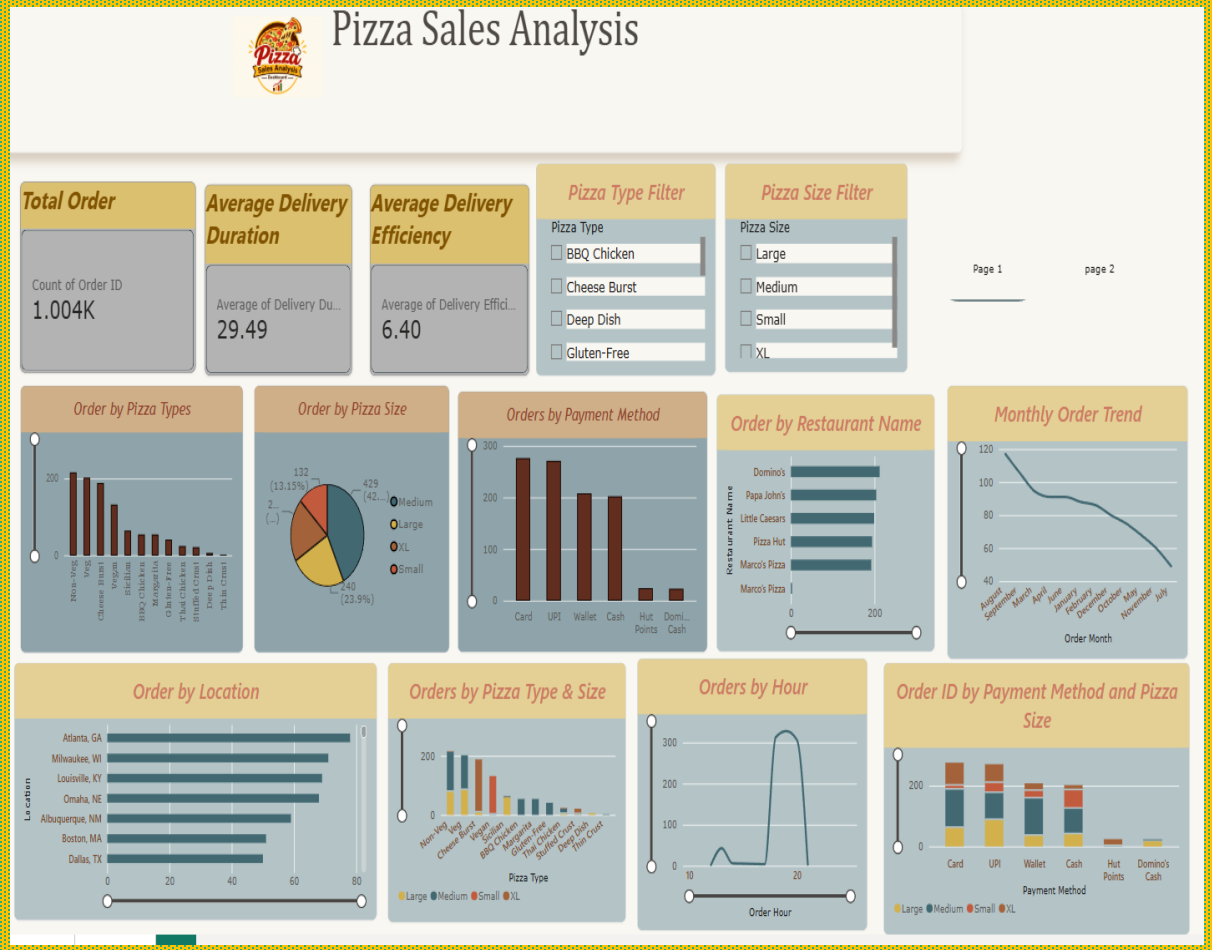

INTERACTIVE FILTERS

Slicers used:

- Pizza Type
- Pizza Size

KEY INSIGHTS

- Order volumes differ between pizza types.
- Pizza sizes show differences in delivery duration.
- Delivery efficiency varies across pizza sizes
- Interactive filters make comparison easier

CONCLUSION

- Power BI makes pizza Sales analysis easier
- The dashboard provides a quick view of important metrics.
- Visualizations help understand Sales and delivery performance.
- The project demonstrates basic data analysis skills

THANK YOU
